Maximum Storage. Minimum Floor Space.

MODULAR
BI-FILE[®]

Spacesaver[®] Storage Systems

Spacesaver Modular Bi-File maximizes filing and storage in minimal space. The concept is simple. Two rows of filing equipment placed in nearly the same footprint where there was once, only one. The front shelf sections rest on movable carriages that travel back and forth. This movement allows access to the back row of stationary shelving. The result is a high-efficiency storage system that dramatically increases storage capacity over lateral files within a specific area.

Every component of the Modular Bi-File is designed with ease of installation in mind. From the lightweight floor and rail to the snap together hook and lance construction of the carriage and platform, simplified installation and future expansion and/or relocation are key elements of design. A Tri-File[®] (three row) configuration is also available.

Optional Overhead Anti-Tip.

Standard In-Rail Anti-Tip on levelable rail.

Optional locking hinged doors provide security.

Optional overhead anti-tip provides added stability (to Bi-File and Tri-File systems).

Shelving sizes available to accommodate media from letter sized files to x-ray jackets and everything in between.

Carriage housing accommodates Spacesaver 4-Post and Case-Type shelving plus a wide range of existing shelving.

Low profile, fully enclosed carriage housings are both attractive and functional.

Optional levelable rail, vinyl covered floor, and extruded aluminum ramp provide a solid base.
