Overview

MATRIX MyBox is an automated self-deposit system for personal belonging. The system function as personal locker and allow users to store personal items such as phones, cameras, disk-on-key, documents and others in a secure and fast way.

How does it work

1. **Tagging**
   - At Regular position, drawers are locked.
   - User tags his visitor/employee card (permitted cards only)
   - *Biometric optional.

2. **Allocating personal compartment**
   - The system will assign private compartment which will automatically open by pulling the flashing drawer.
   - The specific compartment will reopen only by using the same tag.

3. **Documentation**
   - In order to increase system safety, every activity is recorded by a unique video camera.
