Grow Profits Without Adding Labor
Could You Be Working Smarter, Not Harder?

Intelligent Picking For Increased Productivity
Automated storage and picking solutions allow operators to perform at higher levels. By delivering items directly to the operator, travel and search time commonly associated with shelving is drastically reduced. This allows the operator to spend more time picking, increasing overall productivity.

Due to reduced travel and search time in an automated storage and picking solution, picking from shelving that required several workers, often only requires one worker to handle the same volume. Automated storage and picking solutions are a great option when labor is scarce or unreliable. Typically, labor can be reduced by 2/3 while maintaining pick volume.

More often, facilities are choosing to maintain current labor levels when implementing automated storage and picking solutions to increase picking productivity – resulting in higher picking capacities without additional labor.

Reduce Labor by 2/3
- Deliver Stored Items To The Operator & Eliminate Unproductive Travel Time
- Optimized Machine Movement – All Items Are Picked In One Machine Rotation Or Cycle
- Pick Lights Indicate Which Item & Quantity to Pick, Eliminating Time Spent Searching For The Right Part

Before Automation
- Receive Instructions
- Travel
- Pick
- Wait, Mark & Dispose

After Automation
- Receive Instructions
- Travel
- Pick
- Wait, Mark & Dispose

Time That Could Be Spent Picking
